1	Customer Registration – JAVA Array	US001	As an admin, I want to create /update/ delete a customer	* Developer needs to input the following information from the console using programming. 1- To Add the Customer – If option entered is 1 , then Get the customer attributes as mentioned below , create an object and add it to the array. - Consumer ID: An integer value - Bill Number: An integer value - Title: String value - Customer Name: A string value for Customer name - Email: A string value to capture the Email. - Mobile number: 10 digit mobile number - User ID: A random string for user ID with a default value - Password: A string value for Password - Confirm Password: A string value for confirm password * Once all fields are taken as input, Customer details need to be inserted in array. After successful registration, a registration acknowledgment message need to be displayed on the console as "Customer Registration is successful". 2- To Update the Customer details – If option entered is 2 ,then get the email address and consumer id attribute and update the email address for the specific consumer id. Once the Customer object is updated with new value , then an acknowledgment message need to be displayed on the console as "Customer details are updated successfully" 3- To Delete the Customer – If option entered is 3 ,consumer id is fetched and related customer is removed from the array. Once the Customer object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Customer details are deleted" 4. To Select Customers – – If option entered is 4 ,fetch all the customers from the array and print it on the console For all the above operations create separate methods with necessary parameters.				
2	Bill Details– JAVA Array	US002	As an admin, I want to create necessary methods to perform the operations on Bill list	* Developer needs to input the following information from the console using programming to perform the below operation in the array: 1- Add Bill – If option entered is 1 , then get the bill attributes as mentioned below and add it to the array Consumer Number –int Due Amount –double Payable Amount –double Once newly created object is added to the appropriate collection, then an acknowledgment message need to be displayed on the console as "Bill details are added successfully" 2- Update Amount Details – If option entered is 2 ,then get the amount and consumer id and update the amount for the specific consumer id. Once the Bill object is updated with new value , then an acknowledgment message need to be displayed on the console as "Bill details are updated successfully" 3- Delete Bill Details– If option entered is 3 consumer id is fetched and related bill details are removed from the array Once Bill object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Bill Details are deleted" For all the above operations create separate methods with necessary parameters.				
3	Register Complaint – JAVA Array	US003	As an admin, I want to be able to create/ update/ delete a complaint	* Developer needs to input the following information from the console using programming. 1- Register Complaint – If option entered is 1 , then Get the complaint attributes as mentioned below , create an object and add it to the array. - Complaint type: String value - Category: String value - LandMark: String value - Customer Name: A string value for Customer name - Problem : String value - Consumer Number: int value - Address: A string value - Mobile number: 10 digit mobile number * Once all fields are taken as input, Complaint details need to be inserted in array. After successful registration, a registration acknowledgment message need to be displayed on the console as "Successfully registered Complaint". 2- Delete the Complaint – If option entered is 2 ,complaint id is fetched and related complaint is removed from the array Once the Customer object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Complaint details are deleted" For all the above operations create separate methods with necessary parameters.				
4	Consumer Details – JAVA Array	US004	As an admin, I want to be able to search the customer based on the consumer id	* Developer needs to display all the respective customer details of the given customer from the console using programming from preconfigured array. * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted array. Consumer ID CustomerName Mobile Number Email				
5	Bill Details – JAVA Array	US005	As an admin, I want to be able to search the unpaid bill based on the consumer id	* Developer needs to display all the unpaid bill details of the given customer from the console using programming from preconfigured array. * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted array; Consumer ID CustomerName Due Amount Payable Amount				
6	Complaint Details – JAVA Array	US006	As an admin, I want to be able to view the complaints	* Developer needs to display all the respective complaint details of the given customer from the console using programming from preconfigured array. * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted array. Consumer ID CustomerName Complaint Type Category Problem Description Mobile Status				
1	Customer Registration – JAVA ArrayList	US001	As an admin, I want to create /update/ delete a customer	* Developer needs to input the following information from the console using programming. 1- To Add the Customer – If option entered is 1 , then Get the customer attributes as mentioned below , create an object and add it to the collection (arraylist etc.) - Consumer ID: An integer value - Bill Number: An integer value - Title: String value - Customer Name: A string value for Customer name - Email: A string value to capture the Email. - Mobile number: 10 digit mobile number - User ID: A random string for user ID with a default value - Password: A string value for Password - Confirm Password: A string value for confirm password * Once all fields are taken as input, Customer details need to be inserted in arraylist/ appropriate collection. After successful registration, a registration acknowledgment message need to be displayed on the console as "Customer Registration is successful". 2- To Update the Customer details – If option entered is 2 ,then get the email address and consumer id attribute and update the email address for the specific consumer id. Once the Customer object is updated with new value , then an acknowledgment message need to be displayed on the console as "Customer details are updated successfully" 3- To Delete the Customer – If option entered is 3 ,consumer id is fetched and related customer is removed from the collection (arraylist etc.) Once the Customer object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Customer details are deleted" 4. To Select Customers – – If option entered is 4 ,fetch all the customers from the collection (arraylist etc.) and print it on the console For all the above operations create separate methods with necessary parameters.				
2	Bill Details– JAVA ArrayList	US002	As an admin, I want to create necessary methods to perform the operations on Bill list	* Developer needs to input the following information from the console using programming to perform the below operation in the array /list/ appropriate collection: 1- Add Bill – If option entered is 1 , then get the bill attributes as mentioned below and add it to the collection (arraylist etc.) Consumer Number –int Due Amount –double Payable Amount –double Once newly created object is added to the appropriate collection, then an acknowledgment message need to be displayed on the console as "Bill details are added successfully" 2- Update Amount Details – If option entered is 2 ,then get the amount and consumer id and update the amount for the specific consumer id. Once the Bill object is updated with new value , then an acknowledgment message need to be displayed on the console as "Bill details are updated successfully" 3- Delete Bill Details– If option entered is 3 consumer id is fetched and related bill details are removed from the collection (arraylist etc.) Once Bill object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Bill Details are deleted" For all the above operations create separate methods with necessary parameters.				
3	Register Complaint – JAVA ArrayList	US003	As an admin, I want to be able to create/ update/ delete a complaint	* Developer needs to input the following information from the console using programming. 1- Register Complaint – If option entered is 1 , then Get the complaint attributes as mentioned below , create an object and add it to the collection (arraylist etc.) - Complaint type: String value - Category: String value - LandMark: String value - Customer Name: A string value for Customer name - Problem : String value - Consumer Number: int value - Address: A string value - Mobile number: 10 digit mobile number * Once all fields are taken as input, Complaint details need to be inserted in arraylist/ appropriate collection. After successful registration, a registration acknowledgment message need to be displayed on the console as "Successfully registered Complaint". 2- Delete the Complaint – If option entered is 2 ,complaint id is fetched and related complaint is removed from the collection (arraylist etc.) Once the Customer object is identified and removed from the collection, then an acknowledgment message need to be displayed on the console as "Complaint details are deleted" For all the above operations create separate methods with necessary parameters.				
4	Consumer Details – JAVA ArrayList	US004	As an admin, I want to be able to search the customer based on the consumer id	* Developer needs to display all the respective customer details of the given customer from the console using programming from preconfigured arraylist/ appropriate collection. * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted arraylist/ appropriate collection. ; Consumer ID CustomerName Mobile Number Email				
5	Bill Details – JAVA ArrayList	US005	As an admin, I want to be able to search the unpaid bill based on the consumer id	* Developer needs to display all the unpaid bill details of the given customer from the console using programming from preconfigured arraylist/ appropriate collection. . * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted arraylist/ appropriate collection. ; Consumer ID CustomerName Due Amount Payable Amount				
6	Complaint Details – JAVA ArrayList	US006	As an admin, I want to be able to view the complaints	* Developer needs to display all the respective complaint details of the given customer from the console using programming from preconfigured arraylist/ appropriate collection. . * Consumer ID: int value * On submitting the Consumer ID, The console shows rows with columns populated from inserted arraylist/ appropriate collection. ; Consumer ID CustomerName Complaint Type Category Problem Description Mobile Status
